

FOR IMMEDIATE DISTRIBUTION

onOne Software Announces Availability of Perfect Portrait

New product from onOne Software provides automated and intuitive tools for portrait retouching

Portland, OR– November 16, 2011 – onOne Software[®], Inc., a leading developer of innovative, timesaving solutions for professional and advanced amateur photographers, announced today the availability of Perfect Portrait[™] for simply powerful portrait retouching.

Perfect Portrait is a completely new product that offers the latest innovations in portrait retouching for photographers. Automatic face and feature detection along with single-click presets save photographers time from having to make selections manually. Perfect Portrait also includes just the right tools for improving skin texture, skin color, removing blemishes and enhancing features such as eyes, lips and teeth—giving photographers total control over the strength of enhancements and the fastest way to create stunning portraits.

As photographers do more of their work in applications like Adobe[®] Photoshop[®] Lightroom[®] and Apple[®] Aperture[®], onOne Software has evolved its product line to support these changing workflows. Users can access Perfect Portrait directly from Lightroom or Aperture or as a Photoshop plug-in allowing them to use it where they work. To further streamline workflow, photographers can also use Perfect Portrait as a standalone application or as an integrated module in the new Perfect Photo[™] Suite 6.

Key Benefits of Perfect Portrait:

Designed for Portrait Retouching from the Ground Up: Photographers will appreciate having just the right tools to quickly enhance and retouch portraits. Unnecessary tools or controls that might get in the way are left out intentionally.

Automatic Face Detection: Because Perfect Portrait automatically detects faces, photographers can get directly to the art of retouching. Each face in the image is located automatically so that they don't have to be identified through the use of complicated wizards. If there are multiple people in an image, each can have their own, unique settings. Most importantly, the rest of the image is untouched so it maintains its original fidelity.

Automatic Feature Detection: More than just finding each face, Perfect Portrait also quickly finds the eyes and mouth in a portrait automatically. No time is wasted painting in the features or using manual wizards. Because the features are identified right away, photographers can quickly get to the task of enhancing those critical features.

onOne Software Announces Availability of Perfect Portrait

Retouch Brush: The brand new retouch brush in Perfect Portrait removes acne, stray hairs, veins and other blemishes. Just dab the retouch brush on a blemish and it is gone automatically.

Skin Blemish Removal and Smoothing: With Perfect Portrait, you will get great looking natural skin automatically because the application maintains realistic skin structure so portraits don't look over retouched. Small imperfections like wrinkles and deep pores can be quickly smoothed to give the skin an even consistency. Perfect Portrait can be used on just the face or the entire body.

Accurate Skin Color Correction: Perfect Portrait helps achieve accurate and natural skin color automatically. This color correction technology adjusts color based on the skin color and ethnicity of each face in the image.

Works Anywhere: Perfect Portrait works directly with Lightroom and Aperture and even as a standalone application. It also works as a plug-in to Adobe Photoshop and Adobe Photoshop Elements.

Availability

Perfect Portrait is now available as a standalone product for \$99.95 and as part of the Perfect Photo Suite 6 for \$299.95. For more information on Perfect Portrait, go to <http://www.ononesoftware.com/products/suite/perfect-portrait/>

About onOne Software

onOne Software, Inc. a leading developer of innovative software tools for photographers, develops timesaving software solutions for professional and advanced amateur photographers. onOne Software solutions have been created to help photographers spend more of their time behind the camera taking pictures instead of the computer workstation. Such solutions include a wide range of easy-to-use applications and plug-in enhancements for Adobe Photoshop, Photoshop Elements, Photoshop Lightroom, Apple Aperture, iPhone and iPad applications. Founded in 2005, onOne Software is a privately held company located in Portland, Oregon. For additional information, visit <http://www.ononesoftware.com/> or call 1-888-968-1468.
