

## **Kent's Lenblur**

This action mimics the effect of the popular “LensBaby,” which Kent urges you to try because no Photoshop effect can duplicate it entirely.

The action has 3 main aspects: A motion and radial blur; a noise and chromatic aberration routine; and a vignette. You can use the first action alone or in any combination. The noise and CA part is written for both CS or earlier versions of PS. It has built-in flexibility and is not a 'one click' action, although running just the first action is quick and gets good results.

Kent suggests trying the default settings at first, then experimenting. He thanks Danny R for help in crafting the action and Pam R for her insights on the actual effect and the vignette idea.
